**Read the passage and choose the best answer to the following questions**

As we search for better ways to power our world, it's important to find new options that are good for nature.

One idea is solar power. Solar panels catch sunlight and turn it into energy we can use. They're often put on roofs or in sunny places. This energy is clean and won't run out because the sun always shines!

Another idea is wind power. Big windmills (also called turbines) catch the wind's energy and make electricity. They don't create pollution and are good for the Earth. You might see them in fields or near the ocean because the wind there blows hard.

Hydro energy is also a good option. It uses the power of moving water to make electricity. This helps us have energy without harming the environment too much.

We can also help by using less energy. Turning off lights when we're not using **them** and using things like energy-saving light bulbs help save energy. Every little bit helps!

**Question 29.** What is the title of the passage?

- A. Solar power and more
- B. Renewable energy sources
- C. The power of wind turbines
- D. Non-renewable energy sources

**Question 30.** What do solar panels do?

- A. Generate wind energy
- B. Produce pollution
- C. Take in sunlight and create energy
- D. Collect water and generate electricity

**Question 31.** What does the word “**them**” in the last paragraph refer to?

- A. things
- B. lights
- C. energy
- D. electricity

**Question 32.** What is suggested as a way to save energy?

- A. Turn off lights when not in use
- B. Use more energy
- C. Throw energy-saving light bulbs away
- D. Leave lights on

*Read the passage and choose the best answer to the following questions*

As we search for better ways to power our world, it's important to find new options that are good for nature.

One idea is solar power. Solar panels catch sunlight and turn it into energy we can use. They're often put on roofs or in sunny places. This energy is clean and won't run out because the sun always shines!

Another idea is wind power. Big windmills (also called turbines) catch the wind's energy and make electricity. They don't create pollution and are good for the Earth. You might see them in fields or near the ocean because the wind there blows hard.

Hydro energy is also a good option. It uses the power of moving water to make electricity. This helps us have energy without harming the environment too much.

We can also help by using less energy. Turning off lights when we're not using **them** and using things like energy-saving light bulbs help save energy. Every little bit helps!
